A basic implementation of a distributable python package

- Free software: MIT license
- Documentation: <https://quietecstacy.readthedocs.io>.

## 1.1 Installation

```
python -m pip install --index-url https://test.pypi.org/simple/ --no-deps
quietecstacy
```

## 1.2 Basic Usage & Functionalities

Python 3.7.3 (v3.7.3:ef4ec6ed12, Mar 25 2019, 22:22:05) [MSC v.1916 64 bit  
(AMD64)] on win32

Type "help", "copyright", "credits" or "license" for more information.

```
>>> import quietecstacy
```

```
>>> from quietecstacy.save_name import log_in
```

```
>>> log_in()
```

```

```

```
>>> from quietecstacy.prime_list import prime_list
```

```
>>> prime_list(150)
```

```
[2, 3, 5, 7, 11, 13, 17, 19, 23, 29, 31, 37, 41, 43, 47, 53, 59, 61, 67, 71,
73, 79, 83, 89, 97, 101, 103, 107, 109, 113, 127, 131, 137, 139, 149]
```

### 1.3 Features

- Does basic functionalities of a test package, and soon will be updated with more functionalities

### 1.4 Credits

This package was created with [Cookiecutter](#) and the [audreyr/cookiecutter-pypackage](#) project template.

### 2.1 Stable release

To install quietecstasy, run this command in your terminal:

```
$ pip install quietecstasy
```

This is the preferred method to install quietecstasy, as it will always install the most recent stable release.

If you don't have `pip` installed, this [Python installation guide](#) can guide you through the process.

### 2.2 From sources

The sources for quietecstasy can be downloaded from the [Github repo](#).

You can either clone the public repository:

```
$ git clone git://github.com/Siddharths8212376/quietecstasy
```

Or download the [tarball](#):

```
$ curl -OL https://github.com/Siddharths8212376/quietecstasy/tarball/master
```

Once you have a copy of the source, you can install it with:

```
$ python setup.py install
```

## CHAPTER 3

---

### Usage

---

To use quietecstasy in a project:

```
import quietecstasy
```

Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given. You can contribute in many ways:

## 4.1 Types of Contributions

### 4.1.1 Report Bugs

Report bugs at <https://github.com/Siddharths8212376/quietecstacy/issues>.

If you are reporting a bug, please include:

- Your operating system name and version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

### 4.1.2 Fix Bugs

Look through the GitHub issues for bugs. Anything tagged with “bug” and “help wanted” is open to whoever wants to implement it.

### 4.1.3 Implement Features

Look through the GitHub issues for features. Anything tagged with “enhancement” and “help wanted” is open to whoever wants to implement it.

## 4.1.4 Write Documentation

quietecstacy could always use more documentation, whether as part of the official quietecstacy docs, in docstrings, or even on the web in blog posts, articles, and such.

## 4.1.5 Submit Feedback

The best way to send feedback is to file an issue at <https://github.com/Siddharths8212376/quietecstacy/issues>.

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.
- Remember that this is a volunteer-driven project, and that contributions are welcome :)

## 4.2 Get Started!

Ready to contribute? Here's how to set up *quietecstacy* for local development.

1. Fork the *quietecstacy* repo on GitHub.
2. Clone your fork locally:

```
$ git clone git@github.com:your_name_here/quietecstacy.git
```

3. Install your local copy into a virtualenv. Assuming you have virtualenvwrapper installed, this is how you set up your fork for local development:

```
$ mkvirtualenv quietecstacy
$ cd quietecstacy/
$ python setup.py develop
```

4. Create a branch for local development:

```
$ git checkout -b name-of-your-bugfix-or-feature
```

Now you can make your changes locally.

5. When you're done making changes, check that your changes pass flake8 and the tests, including testing other Python versions with tox:

```
$ flake8 quietecstacy tests
$ python setup.py test or py.test
$ tox
```

To get flake8 and tox, just pip install them into your virtualenv.

6. Commit your changes and push your branch to GitHub:

```
$ git add .
$ git commit -m "Your detailed description of your changes."
$ git push origin name-of-your-bugfix-or-feature
```

7. Submit a pull request through the GitHub website.

## 4.3 Pull Request Guidelines

Before you submit a pull request, check that it meets these guidelines:

1. The pull request should include tests.
2. If the pull request adds functionality, the docs should be updated. Put your new functionality into a function with a docstring, and add the feature to the list in README.rst.
3. The pull request should work for Python 2.7, 3.4, 3.5 and 3.6, and for PyPy. Check [https://travis-ci.org/Siddharths8212376/quietecstacy/pull\\_requests](https://travis-ci.org/Siddharths8212376/quietecstacy/pull_requests) and make sure that the tests pass for all supported Python versions.

## 4.4 Tips

To run a subset of tests:

```
$ py.test tests.test_quietecstacy
```

## 4.5 Deploying

A reminder for the maintainers on how to deploy. Make sure all your changes are committed (including an entry in HISTORY.rst). Then run:

```
$ bumpversion patch # possible: major / minor / patch
$ git push
$ git push --tags
```

Travis will then deploy to PyPI if tests pass.

### 5.1 Development Lead

- Siddharth S <siddharth8212376@gmail.com>

### 5.2 Contributors

None yet. Why not be the first?

### 6.1 0.1.0 (2019-08-08)

- First release on PyPI.

## CHAPTER 7

---

### Indices and tables

---

- `genindex`
- `modindex`
- `search`
